Pre Template Checklist

Our experience has proven that an efficient & properly prepared template appointment is essential to a successful stone project.

Template appointments will range from 30-120 minutes depending upon size and complexity. The homeowner or contractor must be on site to answer questions & confirm design decisions.

The template person is not a designer; please have all design decisions made in advance of template date.

Use this checklist & please contact us regarding template readiness- we are happy to help with any questions prior to your appointment!

- All cabinet end panels, doors, drawer fronts and decorative pieces must be attached or in final place. Accuracy of set up has much to do with accuracy of stonework.
- Cabinets and sub tops must be level, flush and plumb, securely fastened to walls and floor. Plywood sub tops should be in new condition & seams not to have lippage greater than 1/16"th.
- Backsplash height should be determined before templater arrives and all areas requiring backsplash must be ready (i.e. Outlets aligned in final positions, window moldings & drywall complete).
- Overhang supports must be installed. PSW can assist with steel bars or honeycomb aluminum.
- Actual sinks, cook tops, fixtures and anything requiring hole cut-outs must be set in place and available at time of template.
- Faucet hole layouts should be decided and marked on sub top.

NOTE: If we are unable to complete a scheduled template appointment, it will result in extra charges and a delay to next available. Typical extra charges:

Re-template trip \$600

Sink cut-out in rough top \$150-250

Cook-top cut-out in rough top \$125-175

Hole drilling at installation \$50 each

Hole drilling after installation \$150 for first, \$50 each additional
